18th December 2006

FOR IMMEDIATE RELEASE:

Domain-Specific Language experts join CG2007 line-up

Industry leader Metacase have announced their support for the Code Generation 2007 event to take place in Cambridge in May 2007. Metacase's CTO and Vice-President Steven Kelly said *"Full code generation with Domain-Specific Modeling or Languages is the biggest step forward for our industry since the move from assembler. This event will help you make it happen."*

MetaCase's [MetaEdit+](#) allows developers to obtain modelling and code generation tool support for domain-specific languages (DSM) within days. DSM languages are more expressive than generic UML and allow developers to generate full code, making development less complex and accelerating development time with a factor of 5 to 10.

[Code Generation 2007](#) will bring together leading software developers, vendors and consultants at Cambridge's Homerton College. Cambridge-based Software Acumen, operators of the web's number one free resource on Code Generation – the Code Generation Network - are organizing the event.

The full event programme is under development and the deadline for submission of session proposals is **12th January 2007**. Accepted session leaders will have their conference fees waived. Visit the CG2007 website for more information.
