FOR Immediate Release:

IASA backs Code Generation 2008

[IASA](#) – the premier association focused on the (software) architecture profession – have lined up as supporting partners of next year's [Code Generation 2008](#) event organized by Cambridge-based software consultancy Software Acumen.

The event will cover technologies that are predicted to be the next evolutionary step in software development such as Software Factories, Model-Driven Architecture and Domain-Specific Languages. Organisations using these approaches are seeing significant increases in developer productivity and software quality as a result so these tools are likely to become increasingly important for software architects in the future.

In return for IASA's promotion of the event to its members a discount on conference fees will be available to IASA members when booking opens in February 2008.

[Code Generation 2008](#) will take place from June 25th-27th 2008 in Cambridge. A Call for Speakers will be issued in October 2007. Visit the [Code Generation 2008](#) web site to register your interest.
